

# Year 5

Mastery Overview  
Spring

## SOL Overview

As well as providing term by term overviews for the new National Curriculum, as a Maths Hub we are aiming to support primary schools by providing more detailed Schemes of Learning, which help teachers plan lessons on a day to day basis.

The following schemes provide exemplification for each of the objectives in our new term by term overviews, which are linked to the new National Curriculum. The schemes are broken down into fluency, reasoning and problem solving, which are the key aims of the curriculum. Each objective has with it examples of key questions, activities and resources that you can use in your classroom. These can be used in tandem with the mastery assessment materials that the NCETM have recently produced.

In addition to this we have also created our own network area where teachers from across the country can share their lesson plans and resources that are linked to our schemes.

We hope you find them useful. If you have any comments about this document or have any ideas please do get in touch.

**The White Rose Maths Hub Team**

## Assessment

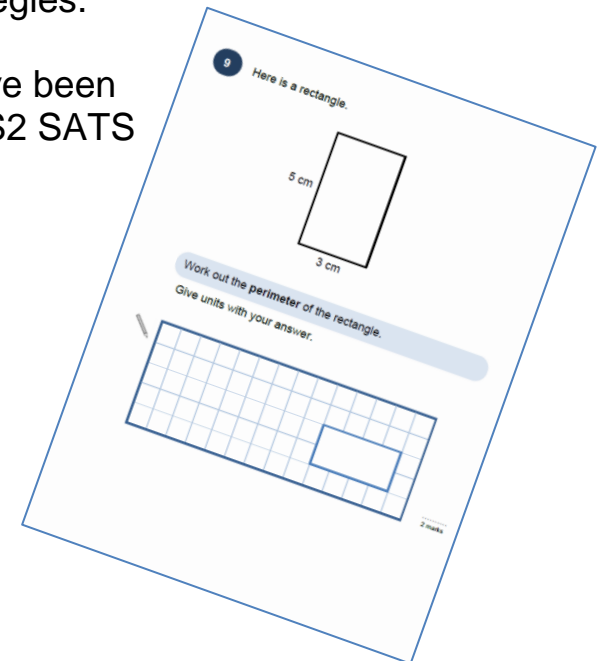

Alongside these curriculum overviews, our aim is also to provide a free assessment for each term's plan. Each assessment will be made up of two parts:

**Part 1:** Fluency based arithmetic practice

**Part 2:** Reasoning based questions

You can use these assessments to determine gaps in your students' knowledge and use them to plan support and intervention strategies.

The assessments have been designed with new KS2 SATS in mind. All of the assessments will be ready by 30 November 2015.

## Teaching for Mastery

These overviews are designed to support a mastery approach to teaching and learning and have been designed to support the aims and objectives of the new National Curriculum.

The overviews:

- have number at their heart. A large proportion of time is spent reinforcing number to build competency
- ensure teachers stay in the required key stage and support the ideal of depth before breadth.
- ensure students have the opportunity to stay together as they work through the schemes as a whole group
- provide plenty of time to build reasoning and problem solving elements into the curriculum.

## Concrete – Pictorial – Abstract

As a hub we believe that all students, when introduced to a key new concept, should have the opportunity to build competency in this topic by taking this approach.

**Concrete** – students should have the opportunity to use concrete objects and manipulatives to help them understand what they are doing.

**Pictorial** – students should then build on this concrete approach by using pictorial representations. These representations can then be used to reason and solve problems.

An example of a bar modelling diagram used to solve problems.

**Abstract** – with the foundations firmly laid, students should be able to move to an abstract approach using numbers and key concepts with confidence.

## Frequently Asked Questions

***We have bought one of the new Singapore textbooks. Can we use these curriculum plans?***

Many schools are starting to make use of a mastery textbook used in Singapore and China, the schemes have been designed to work alongside these textbooks. There are some variations in sequencing, but this should not cause a large number of issues.

***If we spend so much time on number work, how can we cover the rest of the curriculum?***

Students who have an excellent grasp of number make better mathematicians. Spending longer on mastering key topics will build a student's confidence and help secure understanding. This should mean that less time will need to be spent on other topics.

In addition schools that have been using these schemes already have used other subjects and topic time to teach and consolidate other areas of the mathematics curriculum.

***My students have completed the assessment but they have not done well.***

This is your call as a school, however our recommendation is that you would spend some time with the whole group focussing on the areas of the curriculum that they don't appear to have grasped. If a couple of students have done well then these could be given rich tasks and deeper problems to build an even deeper understanding.

***Can we really move straight to this curriculum plan if our students already have so many gaps in knowledge?***

The simple answer is yes. You might have to pick the correct starting point for your groups. This might not be in the relevant year group and you may have to do some consolidation work before.

These schemes work incredibly well if they are introduced from Year 1 and continued into Year 2, then into Year 3 and so on.

## NCETM Mastery Booklets

In addition to the schemes attached the NCETM have developed a fantastic series of problems, tasks and activities that can be used to support 'Teaching for Mastery'. They have been written by experts in mathematics.

It will also give you a detailed idea of what it means to take a mastery approach across your school. Information can be found on the link below.

<https://www.ncetm.org.uk/resources/46689>

## WRMH Primary Network

Over the past 12 months we have been working with a company called MyFlo to develop a free online platform where teachers from across our region (and wider) can share their own resources and lesson plans based on this new curriculum. All our overviews, schemes and assessment materials will be made available on the MyFlo network.

## Everyone Can Succeed

As a Maths Hub we believe that all students can succeed in mathematics. We don't believe that there are individuals who can do maths and those that can't. A positive teacher mindset and strong subject knowledge are key to student success in mathematics.

## More Information

If you would like more information on 'Teaching for Mastery' you can contact the White Rose Maths Hub at [mathshub@trinityacademyhalifax.org](mailto:mathshub@trinityacademyhalifax.org)

We are offering courses on:

- Bar Modelling
- Teaching for Mastery
- Year group subject specialism intensive courses – become a Maths expert.

Our monthly newsletter also contains the latest initiatives we are involved with. We are looking to improve maths across our area and on a wider scale by working with other Maths Hubs across the country.

## Year 5 Overview

	Week 1	Week 2	Week 3	Week 4	Week 5	Week 6	Week 7	Week 8	Week 9	Week 10	Week 11	Week 12
Autumn	Number: Place Value			Number: Addition and Subtraction			Number: Multiplication and Division				Statistics	
Spring	Number: Fractions					Number: Decimals			Number: Percentages			
Summer	Geometry: Angles		Geometry: Shapes		Geometry: Position and Direction	Measurement- Converting Units		Number: Prime Numbers	Perimeter and Area	Measures volume		

<b>Year Group</b>	<b>Y5</b>	<b>Term</b>	<b>Spring</b>
-------------------	-----------	-------------	---------------

Week 1	Week 2	Week 3	Week 4	Week 5	Week 6	Week 7	Week 8	Week 9	Week 10	Week 11	Week 12
<p><b>Number: Fractions</b> Compare and order fractions whose denominators are multiples of the same number.</p> <p>Identify, name and write equivalent fractions of a given fraction, represented visually including tenths and hundredths.</p> <p>Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements <math>&gt;1</math> as a mixed number [for example <math>\frac{2}{5} + \frac{4}{5} = \frac{6}{5} = 1 \frac{1}{5}</math>].</p> <p>Add and subtract fractions with the same denominator and denominators that are multiples of the same number.</p> <p>Multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams.</p> <p>Read and write decimal numbers as fractions [ for example <math>0.71 = \frac{71}{100}</math>].</p> <p>Solve problems involving multiplication and division, including scaling by simple fractions and problems involving simple rates.</p>					<p><b>Number: Decimals</b> Read, write, order and compare numbers with up to three decimal places.</p> <p>Recognise and use thousandths and relate them to tenths, hundredths and decimal equivalents.</p> <p>Round decimals with two decimal places to the nearest whole number and to one decimal place.</p> <p>Solve problems involving number up to three decimal places.</p> <p>Multiply and divide whole numbers and those involving decimals by 10, 100 and 1000.</p> <p>Use all four operations to solve problems involving measure [for example, length, mass, volume, money] using decimal notation, including scaling.</p>			<p><b>Number: Percentages</b> Recognise the per cent symbol (%) and understand that per cent relates to 'number of parts per hundred', and write percentages as a fraction with denominator 100, and as a decimal.</p> <p>Solve problems which require knowing percentage and decimal equivalents of <math>\frac{1}{2}, \frac{1}{4}, \frac{1}{5}, \frac{2}{5}, \frac{4}{5}</math> and those fractions with a denominator of a multiple of 10 or 25</p>			<p>Time at the beginning or end of the term for consolidation , gap filling, seasonal activities, assessments , etc.</p>

	National Curriculum Statement	All Students														
		Fluency	Reasoning	Problem Solving												
Fractions	Compare and order fractions whose denominators are multiples of the same number.	<ul style="list-style-type: none"> <li>Use <math>&lt;</math> <math>&gt;</math> or <math>=</math> to make the statement below correct  <math>\frac{3}{4}</math> <math>\frac{9}{12}</math></li> <li>Order these fractions  <math>\frac{2}{5}</math>, <math>\frac{5}{15}</math>, <math>\frac{3}{10}</math></li> <li>Fill in the missing fraction  <math>\frac{1}{3} = \frac{2}{\quad} = \frac{3}{9}</math></li> </ul>	<ul style="list-style-type: none"> <li><b>Sometimes, always, never</b>                      If two denominators are different multiples of the same number then you can simplify the bigger number to make them the same e.g. <math>\frac{3}{4}</math> <math>\frac{9}{12}</math>  <math>\frac{9}{12}</math> can be simplified to <math>\frac{3}{4}</math></li> <li>Paul thinks denominators with bigger numbers are bigger fractions.                      Prove to him that <math>\frac{1}{4}</math> is bigger than <math>\frac{1}{8}</math>                      Use a diagram/drawing/concrete materials.</li> </ul>	<ul style="list-style-type: none"> <li>Cut out lots of different fractions. Ask children in pairs to sort them into equivalent piles. Ask children to record three more fractions – an equivalent fraction, a bigger fraction and a smaller fraction.</li> <li><b>Fraction trail</b>                      On a grid, write 12 different fractions where all denominators are a different multiple of the 4 times table.                      Player A goes first and chooses a fraction, Player B finds a smaller fraction, Player A finds a bigger fraction and so on. Whoever cannot find a fraction first loses.</li> </ul> <table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td><math>\frac{17}{20}</math></td> <td><math>\frac{17}{32}</math></td> <td><math>\frac{2}{16}</math></td> </tr> <tr> <td><math>\frac{10}{28}</math></td> <td><math>\frac{2}{4}</math></td> <td><math>\frac{20}{36}</math></td> </tr> <tr> <td><math>\frac{18}{44}</math></td> <td><math>\frac{35}{48}</math></td> <td><math>\frac{5}{8}</math></td> </tr> <tr> <td><math>\frac{2}{12}</math></td> <td><math>\frac{22}{40}</math></td> <td><math>\frac{23}{24}</math></td> </tr> </tbody> </table>	$\frac{17}{20}$	$\frac{17}{32}$	$\frac{2}{16}$	$\frac{10}{28}$	$\frac{2}{4}$	$\frac{20}{36}$	$\frac{18}{44}$	$\frac{35}{48}$	$\frac{5}{8}$	$\frac{2}{12}$	$\frac{22}{40}$	$\frac{23}{24}$

$\frac{4}{A}$	$\frac{B}{C}$	$\frac{20}{50}$									

## Fractions

### National Curriculum Statement

Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements  $>1$  as a mixed number [for example  $\frac{2}{5} + \frac{4}{5} = \frac{6}{5} = 1 \frac{1}{5}$ ].

### Fluency

- Convert these from mixed numbers to improper fractions:  
 $3\frac{2}{5}$   
 $2\frac{1}{6}$
- A pizza has 8 slices. At a party, 2 full pizzas and 3 slices are left over. Write this as an improper fraction.
- Pencils are packed 6 to a box. A teacher hands them out and has  $\frac{15}{6}$  left. Write how many boxes she has left as a mixed number.

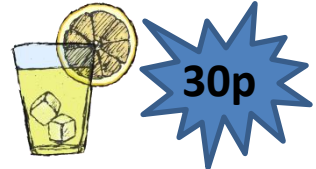

### All Students

#### Reasoning

- True or false**  
A mixed number is not a whole number. Explain why.
- Spot and explain the mistake  

$$\frac{13}{5} = 3\frac{3}{5}$$
- This was the pizza left over at a party.  
  
 Each pizza was cut equally.  
 Anna said, "If you add the  $\frac{11}{5}$  we ate then there was 5 whole pizzas altogether." Do you agree? Explain why.

#### Problem Solving

- For the school's sports day, a group of students prepared  $21\frac{1}{2}$  litres of lemonade. At the end of the day they had  $2\frac{5}{8}$  litres left over. How many litres of lemonade were sold?  

- If they sold the lemonade in 125ml glasses, which they sold at 30p each, how many glasses did they sell and how much did they make?  

## Fractions

### National Curriculum Statement

Add and subtract fractions with the same denominator and denominators that are multiples of the same number.

### Fluency

- Calculate:
 
$$\frac{15}{6} - \frac{5}{3} =$$

$$\frac{24}{8} - \frac{15}{8}$$

$$\frac{2}{3} + \frac{8}{12}$$
- Kelsey and Beth had a bag of sweets. Kelsey took  $\frac{2}{7}$  and Beth took  $\frac{6}{21}$ . What was the difference between their amounts?
- Fill in the missing fractions:
 
$$\frac{11}{7} + \text{---} = \frac{18}{7}$$

$$\frac{18}{5} - \text{---} = \frac{9}{10}$$

$$\text{---} - \frac{4}{6} = \frac{1}{6}$$

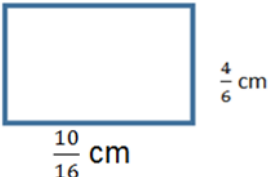

### All Students

#### Reasoning

- Monica and Rachel are given this missing number problem:
 
$$\text{---} - \frac{2}{4} = \frac{1}{4}$$

Monica thinks the missing fraction is  $\frac{3}{4}$ . Rachel disagrees and thinks it's a different fraction. Explain why it could be both.
- Joey eats  $\frac{1}{3}$  of a cake. Ross says, "That means I have  $\frac{7}{9}$  left to eat." Do you agree? Explain why.
- Which perimeter is bigger? Give your answer as a mixed number. What do you notice?
 

$\frac{2}{3}$  cm  

#### Problem Solving

- The green rectangle has a perimeter of  $\frac{22}{4}$ . Work out the value of x.
 

- Beki bought 7L of paint from the shop.

Colour	Amount in tin
Blue paint	$2\frac{1}{4}$ L
Red paint	$\frac{3}{4}$ L
White paint	$1\frac{1}{2}$ L
Yellow paint	1 L
Green paint	$\frac{1}{2}$ L
Purple paint	$1\frac{3}{4}$ L

What variations of paint could she have bought? How many options can you find?

## Fractions

### National Curriculum Statement

Multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams.

### Fluency

- Complete the table:

Multiplication	Improper fraction	Mixed number
$3 \times \frac{4}{7}$	$\frac{12}{7}$	
$2 \times \frac{5}{8}$		
$6 \times \frac{3}{9}$		

- Use the diagram to find the answer.

$$3 \times \frac{2}{3}$$

- Draw a diagram to represent  $5 \times \frac{3}{7}$

### All Students

#### Reasoning

- Tony says, "When I multiply a fraction by a whole number I turn the whole number into a fraction by adding  $\frac{1}{1}$  to it, for example,  $2 \times \frac{6}{8}$  becomes  $\frac{2}{1} \times \frac{6}{8}$ . Does this make a difference? Does it help? Explain why.
- Sally says, "I feel ok multiplying a fraction by a whole number but multiplying a mixed number confuses me." Can you write a set of instructions to help her understand? Include an example in your explanation.

#### Problem Solving

- Abi says, "This diagram represents the children who passed their swimming test in a Year 5 class one week. The exact same data was collected from six other schools."

Write this data as an improper fraction and a mixed number.

- Multiply these mixed numbers by 3 and place them in order from the biggest to smallest

$$2\frac{3}{5}, 2\frac{6}{8}, 2\frac{3}{7}, 2\frac{1}{6}$$

Did you think they would be in that order? Discuss why.

## Fractions

### National Curriculum Statement

Read and write decimal numbers as fractions [ for example  $0.71 = \frac{71}{100}$  ].

### Fluency

- Fill in the blanks:

$$\square = \frac{65}{100}$$

$$\square = 0.88$$

$$0.2 = \square$$

- Write the shaded part of this 100 square grid as a decimal number and a fraction.

- Match the decimal number to the equivalent fraction:

$$0.5 \qquad \frac{50}{100}$$

$$0.05 \qquad \frac{1}{2}$$

$$0.55 \qquad \frac{5}{100}$$

$$0.50 \qquad \frac{55}{100}$$

### All Students

#### Reasoning

- Rob is finding equivalent decimals and fractions. He writes:

$$\frac{30}{100} = 0.30$$

Can both sides of the equals sign be simplified? Explain why.

- True or false?** Only percentages that are multiples of 10 can be simplified.

#### Problem Solving

- Play decimal and fraction dominoes.

0.1	$\frac{30}{100}$	0.3	$\frac{75}{100}$
-----	------------------	-----	------------------

$\frac{1}{10}$
0.64

- Complete the statement below by only using these number cards. You can use these cards more than once.

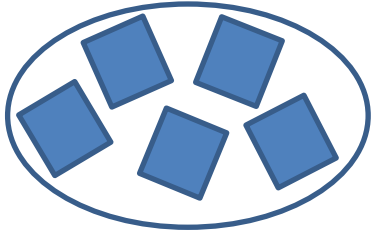

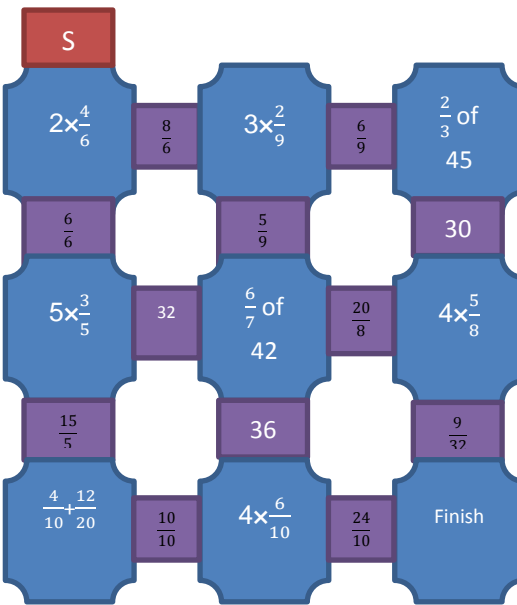

0	0	0	1
1	1	7	7

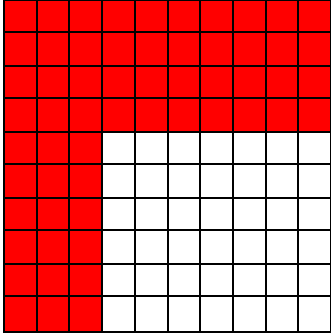

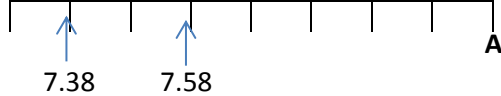

$$\square \cdot \square \square = \frac{\square}{\square}$$

## Fractions

### National Curriculum Statement

Solve problems involving multiplication and division, including scaling by simple fractions and problems involving simple rates.

		1	0	5	3	4	9	6	8			

## Decimals

### National Curriculum Statement

Multiply and divide whole numbers and those involving decimals by 10, 100 and 1000.

### All Students

#### Fluency

- Complete the grid:

	$\times 100$	$\div 1000$	$\times 10$
365			
2669			
12			

- Fill in the boxes:

$$\boxed{\phantom{00}} \times 100 = 38$$

$$56 \boxed{\phantom{00}} = 5.6$$

$$0.8 \times 1000 = \boxed{\phantom{000}}$$

- Some facts have been cut up. Work with a partner to put them back together. e.g.  $74 \div 10 = 7.4$

$100$	$31$
$3100$	$\div 1000$
$\div 100$	$\times 100$
$31$	$= 0.031$
$= 1$	

#### Reasoning

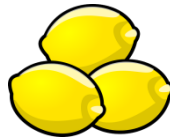

- True or false?**  
When you multiply whole and decimal numbers by 10, 100 or 1000, you just add noughts on to the end.
- If  $5 \times 4 = 20$   
Explain why these facts are true without working them out:  
 $0.5 \times 4 = 2$   
 $200 \div 4 = 50$   
 $0.4 \times 0.5 = 0.2$

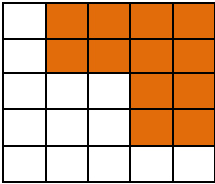

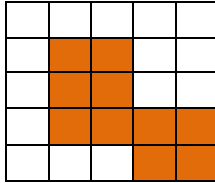

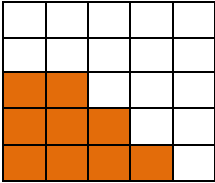

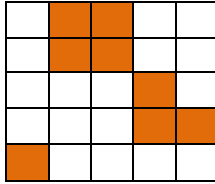

#### Problem Solving

- Put these calculations in order from smallest to biggest:  

$100 \times 540$
$5.4 \times 1000$
$5400 \div 10$
$5400 \div 1000$
$540 \div 10$
- Using a number from column A, an operation from B and a number from C, how many ways can you find to make 70? (There are more than 4 ways!)

A	B	C
7	X	1
70		10
700	÷	100
7000		1000

	National Curriculum Statement	All Students		
		Fluency	Reasoning	Problem Solving
Decimals	Use all four operations to solve problems involving measure [for example, length, mass, volume, money] using decimal notation, including scaling.	<ul style="list-style-type: none"> <li>A shop sold 6 bottles of water for £2.89. Each bottle was 1.5L. She bought 27L of water. How much money did she spend?</li> <li>The flight from London to Alicante is 1465km the flight from Manchester is 289km longer. How long is the flight from Manchester to Alicante?</li> <li>A family of four spent £1517.56 on a holiday. If split equally, how much would it cost each person?</li> <li>Raisins are £1.45 for a packet. I have £10 to spend on raisins. What is the biggest number of packets I can buy?</li> </ul>	<ul style="list-style-type: none"> <li>These are being measured. What unit of measurement should they be measured in. Explain why.</li> </ul> <div style="text-align: center;">  <p>Glass of milk</p> <p>Walking up 25 steps</p>  <p>The distance from Edinburgh to Cornwall</p>  </div> <ul style="list-style-type: none"> <li>Annie is adding up these mass values: 1kg + 343g + 700g She does this calculation:</li> </ul> $  \begin{array}{r}  100 \\  343 \\  + 700 \\  \hline  1143  \end{array}  $ <p>Explain her mistake.</p>	<ul style="list-style-type: none"> <li>James is making buns for his friend's birthday. He finds a recipe on the internet for 20 people.</li> </ul> <p>The ingredients he needs are:</p> <ul style="list-style-type: none"> <li>200g caster sugar</li> <li>200g butter</li> <li>5 eggs</li> <li>200g self-raising flour</li> <li>2.5g baking powder</li> <li>15ml milk</li> </ul> <p>He only wants to make 12. Write the list of ingredients with the amount he needs of each item. <li>These lemons and limes are sold in a bag in a local shop.</li> <div style="text-align: center;">  <div style="border: 2px solid blue; padding: 5px; display: inline-block;"> <p>12 limes 900g £2.40</p> </div>    <div style="border: 2px solid blue; padding: 5px; display: inline-block;"> <p>6 lemons 520g £1.00</p> </div> </div> <p>Work out the price and weight of a single lemon and a single lime.</p> </p>

	National Curriculum Statement	All Students		
		Fluency	Reasoning	Problem Solving
Percentages	<p>Recognise the percent symbol (%) and understand that percent relates to 'number of parts per hundred', and write percentages as a fraction with denominator 100, and as a decimal.</p>	<ul style="list-style-type: none"> <li>There are 100 malteasers in a bag. 56 were eaten. How many are left? Write this as a fraction and as a decimal.</li> <li>There are 200 lego pieces in a box. Theo uses 114 of them to build a robot. Write the amount he used as a percentage out of 100</li> <li>Fill in the missing boxes to make the statement true:  <div style="display: flex; align-items: center; margin-top: 10px;"> <div style="width: 15px; height: 15px; background-color: #4a7ebb; margin-right: 5px;"></div> <math>\% = \frac{\quad}{100} = 0.1</math> </div> </li> </ul>	<ul style="list-style-type: none"> <li>Clare reads 150 pages of her 500 page book. She says, "I have <math>\frac{350}{500}</math> pages left to read." Can she write this as a percentage out of 100? Explain why.</li> <li><b>True or false?</b> You can write 12.5% as a decimal Explain your answer.</li> <li>Lilly has a 100 square grid. She colours in 25% of them and says, "I have coloured in <math>\frac{1}{4}</math>" Is she right? Explain why.</li> </ul>	<ul style="list-style-type: none"> <li>This 50 square grid showing a percentage out of 100 has been cut up. Work out the percentage from the pieces below.</li> </ul> <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-start; margin-top: 20px;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div>
